"I consider myself to be an 'early adopter' of new technologies" Dr. Bellantese confessed; "I am always looking for the best way to serve my patients with the latest dental techniques and the best materials." (Dr Bellantese likes to stay ahead of the curve.)

As with most practitioners, Dr. Bellantese gets new patients through referrals from existing patients and other professionals. . "I want patients to know that I have their best interests in mind and that I am proactive in protecting their health on several levels" , " I like the fact that SURFACEGUARD90 is applied to ALL types of surfaces - especially hard to protect surfaces like carpets and furniture." With SURFACEGUARD90 taking care of the little things Dr. Bellantese can concentrate on the big things -his patients!

One important aspect of the H.E.L.P. program that helped him make his decision to apply the system was the fact that SURFACEGUARD90 products are water based and environmentally friendly. He liked the idea that products are shipped in "condensed" form and mixed on site. This allows for less material waste and lower shipping weights - all good for the environment. Also important was the fact that the SURFACEGUARD90 protectant was non-chemical in its anti-microbial technology - "Nowadays people tend to shy away from poisons and chemicals whenever possible, so the mechanical kill properties of the product fit perfectly with an ecological mindset - I like that.
